

# Brown Bear Pumpkin Carving Template

## Cool Costume!

Brown bears get their name from the color of their fur – but they aren't always brown!

“Brown bears” can be: tan, blonde, gold, brown, silver, or even black!

“Grizzly bears” are a type of brown bear, and get their name from “grizzled” fur – brown fur with silver tips!

### **Dino Brains!**

Dinosaurs (like *T. rex*) are mostly known from fossils made of hard bits – like bones, teeth, and claws.

Dino brains don't fossilize – but scientists can still study them by looking inside a dinosaur's skull!

CT scans show us that, despite being huge (40 feet long!), *T. rex* had a tiny brain – just 7 inches long!

### Meet Lucy!

*Australopithecus afarensis* is one of humanity's ancient relatives, which lived in Ethiopia around 4 million years ago.

The most famous member of this species is AL 288-1, or Lucy, a well-preserved fossil skeleton found in 1977. In Ethiopia, this fossil is called "Dinknesh", meaning "you are marvelous".
